XBRL Filing Manual

Version 2.0

Released on 14th October, 2012|

For Financial Year 2011-2012

For MCA XBRL Validation Tool v2.0

PREFACE

This document aims to facilitate the preparation and filing of XBRL financial reporting data. It provides guidance on the preparation, filing, and validation of financial statements prepared in eXtensible Business Reporting Language (XBRL) format on the MCA portal.

Purpose of this Document

This document describes the various specifications and guidelines to be followed for preparation of XBRL documents. It also includes the various steps required to be followed for submission of the XBRL documents on the MCA portal.

Intended Audience

This document is intended for use by the companies and the XBRL vendors involved in preparation of XBRL documents and for the public users.

Table of Contents

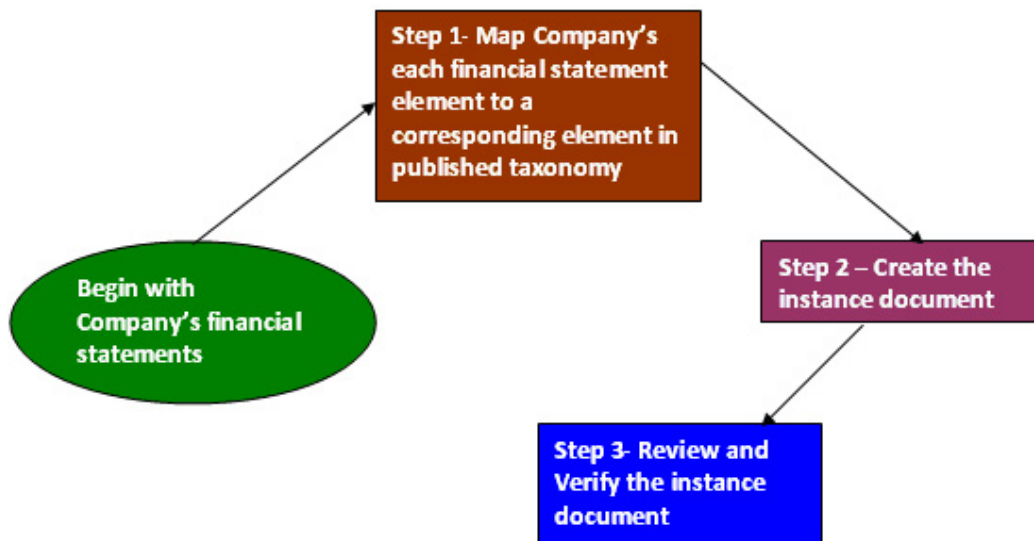

Steps for filing financial statements in XBRL format on MCA portal.....	4
1 Creation of XBRL instance document.....	5
1.1 Map Company's each financial statement element to a corresponding element in published taxonomy	5
1.2 Create instance document for Balance sheet and Profit and Loss Account.....	6
1.3 Specifications to be followed for creation of instance document.....	7

Annexure – II: List of common errors.....	21
Annexure – III: List of currency codes	25

Total No of Pages: 28

Steps for filing financial statements in XBRL format on MCA portal

1. Creation of XBRL instance document
2. Download XBRL validation tool
3. Load the instance document
4. Validate the instance document
5. Pre-scrutiny of the instance document
6. Convert to pdf and verify the contents of the instance document. (This step is essential to ensure that the disclosures contained in XBRL document are as per Audited Financial Statement adopted in the AGM and the textual information entered in the instance document are clearly viewable)
7. Attach instance document to the Form 23AC-XBRL and Form 23ACA-XBRL
8. Submitting the Form 23AC-XBRL and Form 23ACAXBRL on the MCA portal
9. Viewing of balance sheet and profit and loss submitted in XBRL form on MCA portal

1 Creation of XBRL instance document

1.1 Map Company's each financial statement element to a corresponding element in published taxonomy

Companies have the option to create their own XBRL documents in house or to engage a third party to convert their financial statements into XBRL form.

The first step in creation of an instance document is to do tagging of the XBRL taxonomy elements with the various accounting heads in the books of accounts of the company. This would create the mapping of the taxonomy elements with the accounting heads so that the accounting information can be converted into XBRL form.

Mapping is the process of comparing the concepts in the financial statements to the elements in the published taxonomy, assigning a taxonomy element to each accounting concept published by the company.

Selecting the appropriate elements for some financial statement elements may require a significant amount of judgment. For that reason those in the company who are most familiar with the financial statements should be associated with mapping of accounting concepts to taxonomy elements. **The mapping should be reviewed before proceeding further as the complete reporting would be dependent on the mapping.**

In case any information is present in the financial statements for which corresponding tag/element is not available in the taxonomy, then the same needs to be captured in the next-best-fit element in the

taxonomy or should be included under the corresponding 'Others' element. This should be followed only in case the relevant tag is not available in the taxonomy. It should not to be used generally. Further, it is imperative to include footnote w.r.t. the same while preparing the instance document.

For tagging or capturing the information which is often included in brackets in the labels in the company's financial statements, can either be captured as footnote or if detailed tags are available, the same should be tagged with the detailed tags in the taxonomy.

The complete information as contained in the annual accounts and related documents; and the information required to be filed with the Registrar of Companies should be reported in the XBRL instance documents to be submitted with MCA.

For preparing instance document, the taxonomy as applicable for the relevant financial year is to be used.

1.2 Create instance document for Balance sheet and Profit and Loss Account

Once the tagging of financial statement accounting elements with the published taxonomy elements is done, the next step is to create the instance document. An instance document is a XML file that contains business reporting information and represents a collection of financial facts and report-specific information using tags from the XBRL taxonomy.

It is to be noted that no extensions to the core Taxonomy will be allowed.

Separate instance documents need to be created for the following:

- (i) Stand Alone Balance sheet of the company
- (ii) Stand Alone Profit and Loss Account of the company
- (iii) Consolidated Balance sheet of the company
- (iv) Consolidated Profit and Loss Account of the company

The instance document should contain the financial information for both the current as well as the previous financial year.

Consolidated balance sheet and Profit and Loss instance documents to be created only in case the same is applicable to the company.

Once the instance document has been prepared, it needs to be ensured that the instance document is a valid instance document and all the information has been correctly captured in the instance document. MCA Validation Tool provides for 'human readable' pdf printable form as well as a view of the instance document.

1.3 Specifications to be followed for creation of instance document

The following are the specifications to be followed while preparing the instance document:

1.3.1 Technical Specifications

- 1 The value of the xlink:href attribute in the schemaRef element of the instance document must be according to table shown below:

Taxonomy	xlink:href value
C&I 2012	http://www.mca.gov.in/XBRL/2012/08/02/Taxonomy/Cnl/in-ci-ent-2012-03-31.xsd
C&I 2011	http://www.mca.gov.in/XBRL/2011/08/27/Taxonomy/Cnl/ci/in-gaap-ci-2011-03-31.xsd

- 2 The value of the scheme attribute of the identity element in the context must be <http://www.mca.gov.in/CIN>.
- 3 An XBRL instance document must be schema valid according to all schemas in the Discoverable Taxonomy Set (DTS).
- 4 The value of identity element in the context must all be x-equal and must be the CIN of the company.
- 5 An instance must not contain duplicate xbrli:context elements. Duplicate contexts are those which have the same scenario and period elements.
- 6 Every xbrli:context element must appear in at least one contextRef attribute in the same instance document.
- 7 An instance document must not have more than one fact having the same element name and equal contextRef attributes.
- 8 All monetary facts must have the same unitRef attribute. However, in case of monetary values related to subsidiary information like share capital, reserves etc. of subsidiary can be reported in different currency therefore these can have different unitRef attribute.
- 9 The facts corresponding to a single concept must not have contextRef attributes pointing to contexts with overlapping time period. In case of periodType="instant", it means to have same date, and in case of periodType="duration", it means to have a duration that overlaps. For example: The following contexts have overlapping duration, this would not be allowed.

```
<xbrli:context id="D2010">
<xbrli:entity>
<xbrli:identifier scheme="http://www.mca.gov.in/CIN">L24223MH1946PLC005434</xbrli:identifier>
</xbrli:entity>
<xbrli:period>
<xbrli:startDate>2009-04-01</xbrli:startDate>
<xbrli:endDate>2010-03-31</xbrli:endDate>
</xbrli:period>
</xbrli:context>
```

```
<xbrli:context id="I2010">
<xbrli:entity>
<xbrli:identifier scheme="http://www.mca.gov.in/CIN">L24223MH1946PLC005434</xbrli:identifier>
</xbrli:entity>
<xbrli:period>
<xbrli:startDate>2009-08-01</xbrli:startDate>
<xbrli:endDate>2010-07-31</xbrli:endDate>
</xbrli:period>
```

</xbrli:context>
 </xbrli:period>
 </xbrli:context>

- 10 A link:footnoteLink element must have no children other than link:loc, link:footnote and link:footnoteArc.
- 11 A link:footnoteLink link:loc, xlink:href attribute must start with the sharp sign "#".
- 12 Every nonempty link:footnote element must be linked to at least one fact.
- 13 Non significant digits for values for numeric facts MUST be equal to "0".
- 14 An instance document must not contain unused units.
- 15 If the unescaped content of a fact with base type nonnum:escapedItemType contains the "<" character followed by a QName and whitespace, "/>" or ">", then the un-escaped content must contain only a sequence of text and XML nodes.
- 16 A fact is defined to have a footnote if it has an id attribute and a link:footnoteArc to a nonempty link:footnote in the same instance.
- 17 The filing is required to reference certain recognized schemas and linkbase. Filings must always refer to recognized files at the specified URI locations. A reference to a local copy will not be allowed.
- 18 The xsi:nil="true" attribute must be used only to convey a value that is different from both "zero" and different from not reporting the fact at all, or to identify a fact detailed only by a link:footnote.
- 19 The value of the decimals attribute of a fact must correspond to the accuracy of the corresponding amount as reported in the financial statements.
- 20 The content of a numeric fact never has a scale factor.
- 21 Do not define or use units that imply a scale factor on a currency.
- 22 Text that is shown in the financial statements at the bottom of a page or at the bottom of a table preceded by a superscript must appear in the instance as the text of a link:footnote element.
- 23 Each unit should appear with only one scale factor in a given instance.
- 24 Every numeric fact (such as 'Number of shares') must also have an associated unit (e.g. xbrli:shares) and the unit must be declared.
- 25 Filers must use one of the taxonomies as specified in the disclosure system as their standard taxonomy.
- 26 Encoding of all XBRL documents must be "UTF8".
- 27 The xbrli:xbrl element must not have any facts with the precision attribute.
- 28 The textual information in the instance document should have the language attribute as 'en'.
- 29 Instance document generated should be valid as per the taxonomy schema otherwise the XML generated will not be properly formed and you might get errors which start with 'cvc'. This is a basic level error and the software vendor needs to be contacted for these errors i.e. **cvc-complex-type.2.2**. The schema validator used is Xerces from Apache (<http://xerces.apache.org/>) which is Industry Standard Schema Validator.
- 30 Default member for any axis should never come in the instance document.
- 31 If no value is entered for any Axis having dimension-default, the default value shall be inferred and same shall be rendered in XBRL Tool and PDF.
- 32 Any context in the instance document must not contain segment element in the entity.
- 33 All the references to dimensions, explicit members and line-items must be associated with valid namespaces as given in the taxonomy.
- 34 All the dimensional contexts should be valid with respect to all the hypercubes of at-least one base Set.
- 35 Non-Dimensional element must not contain scenario or segment element in context referred by contextRef.

HTML Guidelines:

These guidelines need to be adhered to by the companies to provide the textual information in the instance document. Please note that all textual information would be displayed in the viewer tool / converted human readable document as per the format given by the company in the instance document

Please note that the XBRL content will be rendered in multiple media types (including HTML viewer, print medium, small screen devices, pdf etc). It is required that the embedded HTML for providing textual information is properly rendered in each of the media types. Hence, it is prescribed that the HTML contents follow the below guidelines.

- a) All tags must be properly closed and must be in lower case.
- b) The following predefined css classes can be used for displaying.
 - header1 - top level header
 - header2 - next level header
 - header3 - even next level header
 - header4 - even next level header
 - header5 - bottom level header
 - bordered - tag with visible borders
 - unbordered - tag with invisible borders
 - tableHeader - headers of the table
 - tableRow - row in the table
 - tableRowLabel - the label for a row
 - tableRowValue - A value inside a table
 - normalText - Normal text
 - noteText1 - For writing a note level 1 (top level) [notes are text that are important to mention, but does not match exactly with the context of the text (not to be confused with XBRL context). The top level will be shown as most important]
 - noteText2 - For writing a note level 2
 - noteText3 - For writing a note level 3
 - noteText4 - For writing a note level 4 (bottom level)
 - numericValue - Used for specifying numeric values
 - nonNumericValue - Used for non-numeric text
 - highlightedText1 - Highlighted text level 1 (top level)
 - highlightedText2 - Highlighted text level 2
 - highlightedText3 - Highlighted text level 3
 - highlightedText4 - Highlighted text level 4 (bottom level)
- c) Specifying style attribute for html tags is not allowed.
- d) <div> and tag may be used for organizing content.
- e) Multiple classes for the same element can be specified by separating them by space.
- f) Only allowed tags are <div>, , <p>,
, <table>, <td>, <tr>, <thead>, <tfoot>, <tbody>, <th>, <col>, <colgroup>. HTML formatting tags like , <i> etc. are not allowed.
- g) Please avoid more than one level of table nesting.
- h) Processing instructions are not allowed.
- i) The following entities are allowed - & < >. No other entities are allowed.
- j) In case '&' is there in the string value of any element in the instance document, the same should be specified as '&'

1.3.2 Business Specifications

1. The instance document prepared should conform to the business rules framed by MCA for preparation and filing of the financial statements in XBRL mode. The business rules are available on the XBRL website of the Ministry (www.mca.gov.in/XBRL).
2. It is to be noted that these Business Rules are the minimum set of rules which are required to be reported. The complete information as contained in the annual accounts and related documents; and the information required to be filed with the Registrar of Companies should be reported in the XBRL instance documents to be submitted with MCA. It is to be noted that even if any element is optional or exempted in the business

rules, but the same is available in the annual accounts, then the same should be reported in the instance documents.

3. It is to be noted here that validation of the instance document on the MCA XBRL validation tool is with respect to the taxonomy and the MCA business rules. The validation tool is not verifying the quality of tagging, completeness and correctness thereof. **The quality of tagging, completeness and correctness of the instance document is the responsibility of the company and the person certifying the XBRL filings.**
4. **General information about financial statements-** The information should be provided in the instance documents as per the following classification for Extended Link role - **Disclosure of general information about company**

Element Name	BS instance	PL instance
DisclosureOfGeneralInformationAboutCompanyAbstract		
DisclosureOfCompanyInformationAbstract		
NameOfCompany	Yes	Yes
CorporateIdentityNumber	Yes	Yes
PermanentAccountNumberOfEntity	Yes	Yes
AddressOfRegisteredOfficeOfCompany	Yes	Yes
TypeOfIndustry	Yes	Yes
DisclosureOfDocumentInformationAbstract		
DateOfBoardMeetingWhenFinalAccountsWereApproved	Yes	Yes
PeriodCoveredByFinancialStatements	Yes	Yes
DateOfStartOfReportingPeriod	Yes	Yes
DateOfEndOfReportingPeriod	Yes	Yes
NatureOfReportStandaloneConsolidated	Yes	Yes
ContentOfReport	Yes (Value should be Balance Sheet)	Yes (Value should be Statement of Profit & Loss)
DescriptionOfPresentationCurrency	Yes	Yes
LevelOfRoundingUsedInFinancialStatements	Yes	Yes
TypeOfCashFlowStatement	Yes	
DisclosureOfOtherGeneralInformationAbstract		
SRNOOfForm66	Yes	
DateFromWhichRegisterOfMembersRemainedClosed	Yes	
DateTillWhichRegisterOfMembersRemainedClosed	Yes	
DisclosureOfPrincipalProductOrServicesAbstract		
TotalNumberOfProductOrServiceCategory		Yes
DescriptionOfPrincipalProductOrServicesCategory		Yes
DisclosureOfPrincipalProductOrServicesTable		Yes

TypesOfPrincipalProductOrServicesAxis		Yes
DisclosureOfPrincipalProductOrServicesLineItems		Yes
ProductOrServiceCategoryITC4DigitCode		Yes
DescriptionOfProductOrServiceCategory		Yes
TurnoverOfProductOrServiceCategory		Yes
HighestTurnoverContributingProductOrServiceITC8DigitCode		Yes
DescriptionOfProductOrService		Yes
UnitOfMeasurementOfHighestContributingProductOrService		Yes
TurnoverOfHighestContributingProductOrService		Yes
QuantityOfHighestContributingProductOrServiceInUom		Yes

5. Since the standard taxonomy as published by MCA is to be used and no extensions are allowed. Hence in such cases, companies are required to strictly follow the calculation relationships of taxonomy and derive the totals and sub-totals accordingly. Following the calculation link base will ensure there are no calculation inconsistencies, except for the unavoidable errors which are due to mutually exclusive extended links.
6. It is suggested that whenever any value or information are adjusted or clubbed to match the calculation relationships (and thus are different from the actual financial statements of the company), a footnote describing the adjustments made should be provided.
7. While specifying members in case of a typed dimension, the member names should be uniform and in sequential order. For eg: While providing director details in Details of directors signing balance sheet [Table], the member names may be specified as Director 1, Director 2, Director 3.....
8. For C&I taxonomy for F.Y. 2010-11, In case of Director details, if last name of the director is not available as per the DIN details, then the same should be mentioned as dot(.). Please note that in such case, the element for Last name of director should be included in the instance document.
9. For C&I taxonomy for F.Y. 2010-11, In case of standalone instance document, if the following error appears – *“As NetProfitLoss is present, at least one of the following elements is mandatory: [ShareEarningsAssociatesJointVentures, AdjustmentsRelatedMergerAcquisitions, ShareMinorityInterestProfitLoss, NetProfitLossbeforeMinorityInterestShareJointVenture]”*
10. In such case, if the element ‘NetProfitLossbeforeMinorityInterestShareJointVenture’ is not available in the financial statements, then you are required to provide the same value as the value provided for element ‘NetProfitLoss’.

2 Download MCA XBRL validation tool from MCA portal

A Validation Tool has been provided on the MCA XBRL portal for validating the generated XBRL instance document. Validating the instance document is a pre requisite before filing the balance sheet and profit & loss account on MCA portal. You are required to download the tool from the portal and validate the instance document before uploading the same. The MCA XBRL validation tool can be downloaded from the XBRL website of the Ministry (www.mca.gov.in/XBRL). This Validation Tool shall be used for all MCA XBRL filings i.e. Financial Statement FY 2010-11 (based on previous Schedule VI) and FY 2011-12 (based on new Schedule VI) as well as Cost Audit and Compliance Report (which shall be enabled later in the tool). Before Validating an Instance document, the applicable taxonomy is to be selected by the user from the drop down option "taxonomy".

In case the user is under LAN network, then he/she is required to click the link 'Proxy Settings' under 'Taxonomy' menu in the tool to enter the Proxy Host and Port along with user name and password. This is to setup the Internet connection, required to download the taxonomy through the XBRL Validation Tool.

3 Load the Instance Document in the validation tool

To load the instance document, you need to click the open button, select the instance document and open it. You need not exit the tool to load another instance document just click on 'open' again in the menu bar to open the next document.

The detail of the company is available under the General Information tag in the XBRL viewer.

4 Use the tool to validate the instance document

The next step is to validate the instance document. The following validations shall be performed by the tool-

- Validating that the instance document is as per the latest and correct version of taxonomy prescribed by MCA
- All mandatory elements have been entered
- Business Rules as specified by MCA
- Validations relating to XBRL technical Specifications as per taxonomy

See the Taxonomy Architecture Guide and Business Rules provided on the MCA XBRL portal for further details.

To know about '**How to interpret validation errors**' please refer [Annexure – I](#)

For '**List of common errors**' please refer [Annexure – II](#)

5 Perform pre-scrutiny of the validated instance document through the tool

Once the instance document is successfully validated from the tool, the next step is to pre-scrutinise the validated instance document with the help of the same tool. For pre-scrutinizing the instance document, a working internet connection shall be required. In the Pre-scrutiny, the server side validations (i.e. validations which are to be validated from the MCA21 system) shall be performed.

6 Final verification post pre-scrutiny of the document

Once the instance document has been successfully pre-scrutinized, the next step is to generate pdf by using 'Export to pdf' functionality in the tool to verify the final instance document. It is imperative that the company and the professional certifying the instance documents should use this feature to verify the accuracy of the instance document.

In case there is pdf conversion error or the size of the converted pdf is zero kilobytes, then check the textual information entered in the instance document and follow the html guidelines provided under the technical specifications to correct the instance document and validate and pre-scrutinize again.

Important Note:

Verification of PDF document is essential to ensure that the textual information entered in the instance document is clearly viewable. It shall be ensured that disclosures in this pdf file are as per the adopted and published financial statement of the company in all material aspects. It may however be noted that due to XBRL taxonomy, HTML guidelines, etc, the display/presentation of these disclosures may not exactly match with those in published financial statements of the company. Such variations in human-readable' pdf version of the XBRL document and published financial statements of the company are unavoidable, and thus permitted.

In case of validation errors (other than warnings) with respect to non-adherence to the HTML guidelines, PDF document will not be created. For such cases, the HTML guidelines needs to be followed and the instance document needs to be corrected, validated and pre-scrutinized again

7 Attach instance document to the Form 23AC-XBRL and Form 23ACA-XBRL

There is a separate set of Form 23AC-XBRL and Form 23ACA-XBRL available on the MCA portal for filing in XBRL instance documents by the Company under section 220 of the Companies Act. First fill up the Form 23AC-XBRL and Form 23ACA-XBRL. Thereafter, attach the validated and pre-scrutinised instance document for Balance sheet to Form 23AC-XBRL. Similarly, the instance document for Profit and Loss account is to be attached to Form 23ACA-XBRL. Separate instance documents need to be prepared for Standalone financial statements and consolidated financial statements.

8 Submitting the Form 23AC-XBRL and Form 23ACA-XBRL on the MCA portal

After the forms are filled, you are required to perform pre-scrutiny of the form, sign the form and then upload the same as per the normal eForm filing process. It shall be validated that the attached instance documents are validated and pre-scrutinised from the XBRL validation tool.

9 Viewing of balance sheet and profit and loss submitted in XBRL form on MCA portal

The XBRL instance documents submitted along with Form 23AC-XBRL and 23ACA-XBRL are in machine readable format. Therefore, for viewing the same in a human readable format, these shall be converted into human readable format by the MCA21 system. For viewing the same on MCA portal and for taking certified copies of the same, these converted documents shall be made available.

Annexure – I: How to interpret validation errors

Once the validation has been performed you will see a list of errors which have occurred. Please follow the instructions given below to interpret those errors -

- All the Element Names will be shown within single quotes i.e. 'NatureOfReportStandaloneConsolidated'
- All the values will be shown within square brackets i.e. [Main]
- All the explicit members must come within curly brackets i.e. {ShareCapitalMember}
- All the axis names will be shown within parenthesis i.e. (NameOfShareHolderAxis)
- Errors which start with “cvc” are those which have occurred for the reason that the instance document generated is not as per valid taxonomy schema and the XML is not properly formed. This is a basic level error and the software vendor needs to be contacted for these errors i.e. cvc-complex-type.2.2. The schema validator used is Xerces from Apache (<http://xerces.apache.org/>) which is Industry Standard Schema Validator.
- In case of C&I Taxonomy for F.Y. 2010-11, In some of the errors you might see the term “tuple” being used. The same has been explained below for your understanding –
Tuples: are a set of elements and its sub elements which when grouped together define an entity

For example, the elements 'NameofDirector', 'DirectorIdentificationNumberOfDirector' and 'DateOfBirthOfDirector' do not mean anything individually. However, if these elements are grouped together inside element 'DetailsOfDirectors', they would represent the name, DIN and date of birth of the same director. Details of another director can then be provided in a separate 'DetailsOfDirectors' tag in the same manner. Here, 'DetailsOfDirectors' is a tuple element.

- In case of C&I Taxonomy for F.Y. 2011-12, in some of the errors you might see the terms like “table”, “axis”, “explicit-members” and “typed-members”. The same have been explained below for your understanding –
Table (Hypercube): is a collection of axes (dimensions) when grouped together define an entity.
Axis (Dimension): is a category used to analyze the information about the items having relationship with a table.
Explicit-members: are domains that are used to express an explicit dimension. It is an element defined in the taxonomy.
Typed-members: are domains that are used to express a typed dimension. The dimension value for simple type domain is decided by the user creating instance document.

For example,

1) The item 'TypeOfShare' has a table 'DisclosureOfClassesOfShareCapitalTable' which is described by an axis 'ClassesOfShareCapitalAxis'. This axis is further expressed by explicit-members such as 'EquityShares1Member', 'EquityShares2Member' etc.

2) The item 'DescriptionOfDiscontinuedOperations' has a table 'DisclosureOfDiscontinuedOperationsTable' which is described by an axis 'DisclosureOfDiscontinuedOperationsAxis'. This axis is further expressed by a typed-domain 'DiscontinuingOperationsDomain' which is a simple type domain whose value is decided by the user preparing the instance document.

Annexure – II: List of common errors

1. Issue in net connectivity. Please check your connection.

In case the user is under LAN network, then he/she is required to click the link 'Proxy Settings' under 'Taxonomy' menu in the tool to enter the Proxy Host and Port along with user name and password. This is to setup the Internet connection, required to download the taxonomy through the XBRL Validation Tool.

2. The pdf is not getting generated or pdf generated is of zero kilobytes in size.

Ex: Error creating pdf.

Resolution: Please check the textual information entered in the instance document and follow the html guidelines provided in [section 1.1.3.1 point no. 38](#) technical specifications to correct the instance document and validate and pre-scrutinize again

3. The format of the date entered is not as per the valid format.

Ex: cvc-datatype-valid.1.2.1: '01-04-2011' is not a valid value for 'date'.

Resolution: It should be in 'yyyy-mm-dd'.

4. For Boolean data types 'Yes' or 'No' has been entered.

Ex: cvc-datatype-valid.1.2.1: 'yes' is not a valid value for 'boolean'.

Resolution: Only 'True' or 'False' can be entered for Boolean DataType

5. 0-100 entered for Percentage Data Type fields

Ex: ProportionOfVotingPowerInAssociate should be less than equal to 100%.

Resolution: Only value between 0-1 needs to be entered. For example to report 60 % as value you need to enter 0.6 in the field.

6. Wrong Currency code like Rs. entered.

Ex:

- cvc-id.1: There is no ID/IDREF binding for IDREF 'Rs'.*
- No valid unit specified for monetary item {http://www.xbrl.org/in/2011-03-31/in-gaap}ProvisionCurrentTax*
- No unit defined for unit id Rs*
- Invalid unit specified for monetary item {http://www.xbrl.org/in/2011-03-31/in-gaap}AuthorisedPreferenceShareCapital*
- Reporting currency should be in INR for 'AuthorisedPreferenceShareCapital'*

Resolution: For Indian Currency 'INR' needs to be entered. For correct currency codes please refer [Annexure – III](#)

7. Ordering of elements in a tuple is not correct.

Ex: cvc-complex-type.2.4.a: Invalid content was found starting with element 'in-gaap:CountryOfIncorporationOrResidenceOfAssociate'. One of '{http://www.xbrl.org/in/2011-03-31/in-gaap}NameOfAssociate' is expected.

Resolution: The order of elements in a tuple should be as per the order in presentation link base of the taxonomy.

8. Mandatory fields have not been entered.

Ex: Element 'ProvisionCurrentTax' is required - Not present for date: 31/03/2010

Resolution: Please refer Taxonomy and Business Rules for the list of mandatory elements.

9. For Membership number of Auditor even letters have been entered i.e. A***.**

Ex: 'MembershipNumberOfAuditor' at least one value is not of valid format: [A534].

Resolution: Only numeric value needs to be entered.

10. Financial information entered for current year but not for previous year.

Ex: Since 'ProvisionCurrentTax' is entered for the current year, corresponding value for previous year should be entered.

Resolution: If any financial element is entered in current year then it shall be mandatory to enter corresponding previous year. This rule shall not be applicable in case of the balance sheet/ profit and loss account in respect of first financial year of the company. Similarly in case any financial element is entered for the previous year then corresponding value for current year should be entered. For details on these please refer Taxonomy and Business Rules.

11. For C&I taxonomy for F.Y. 2010-11, in case of standalone instance document, if the following error appears – “As *NetProfitLoss* is present, at least one of the following elements is mandatory: [ShareEarningsAssociatesJointVentures, AdjustmentsRelatedMergerAcquisitions, ShareMinorityInterestProfitLoss, NetProfitLossbeforeMinorityInterestShareJointVenture] -

Resolution: In extended link role [200000] Income Statement [Main], in case the element 'NetProfitLossbeforeMinorityInterestShareJointVenture' is not available in the financial statements, then you are required to provide the same value as the value provided for element 'NetProfitLoss'.

12. In case all the mandatory line-items of a table are not entered in the instance document.

For example: For table 'DisclosureOfIntangibleAssetsTable' mandatory element(s) ['IntangibleAssets', 'ChangesInIntangibleAssets'] is/are not present on explicit-members:{InternallyGeneratedIntangibleAssetsMember, AccumulatedAmortizationAndImpairmentMember, GoodwillMember} for date:31/03/2011

Resolution: The element(s) mentioned in square bracket should be present for all the mentioned explicit members.

13. The elements of table 'DisclosureOfAuditorsQualificationsReservationsOrAdverseRemarksInAuditorsReportTable' is entered for multiple explicit members.

For example: The element 'DisclosureInAuditorsReportRelatingToFixedAssets' for table 'DisclosureOfAuditorsQualificationsReservationsOrAdverseRemarksInAuditorsReportTable',

is present on more than one members of (AuditorsQualificationsReservationsOrAdverseRemarksInAuditorsReportAxis). This is required to be entered only on any one member for current year.

Resolution: The element is present on more than one member on axis 'AuditorsQualificationsReservationsOrAdverseRemarksInAuditorsReportAxis'

14. The element is reported for a child explicit-member and not for its parent member in the domain hierarchy on an axis.

For example: The parent member {OfficeEquipmentMember} for element 'TangibleAssets' should be present, for axis :(ClassesOfTangibleAssetsAxis) for period as on 2011-03-31

Resolution: If any element is present for a child member, then It should be present for the mentioned parent member as well (if parent member is not exempted).

15. The element is reported for a parent explicit-member but not for any child member in the domain hierarchy on an axis.

For example: Atleast one child member out of these { 'TermLoansFromBanksMember' 'TermLoansFromOthersMember' } should be present, for element 'Borrowings' for axis :(ClassificationOfBorrowingsAxis) for period as on 2012-04-01

Resolution: If any element is present for a parent member, then It should be present for atleast one of the mentioned child members.

16. The elements are not entered for ordered explicit members.

For example: The value for item 'ParValuePerShare' should be present for the member {EquityShares1Member} for Period 2011-04-01 to 2012-03-31. The Element entered for EquityShares2Member and EquityShares3Member but not for EquityShares1Member.

Resolution: The element should be present for mentioned explicit member(s). The ordering is referred to presentation linkbase.

17. In case of mandatory table, there is no element present.

For example: Table DetailsOfDirectorsSigningBalanceSheetTable is mandatory as on 2012-03-31

Resolution: Atleast one of the elements of a table should be present for one of the explicit members.

18. An element having dimensional relationship is invalid with respect to scenario element in the referenced context.

For example: The item {http://www.icaai.org/xbrl/taxonomy/2012-03-31/in-gaap}NatureOfOtherIntangibleAssets in context D2012_NotAll_DisclosureOfIntangibleAssetsTable does not have any valid hypercube set in any role

Resolution:

The scenario element must be dimensionally valid for atleast one definition base set for that element.

All the references to dimensions and dimension values in scenario element should be as per taxonomy including namespaces.

It should not contain any combination of dimension values which are excluded by notAll relationship defined for that element.

It should not contain reference to default dimension value.

It should not contain reference to dimension values whose usable attribute is set as false in taxonomy (Freezed)
